(a) common deployment setup

excluded from quantization,
not checked by its metrics

last-block activation
> 65,504 (fp16 limit)
→ inf → NaN
→ whole output lost

checked by
quantization SNR,
outlier ratio

(b) same image, same question

Q: What is the status of the bus? (answer: moving)

Task only, bf16	`"moving."` max activation 76,800
Task only, fp16	`"!!!!!!!!!!!!!!!!"` 76,800 > 65,504: output lost
Task only, fp16 + correction	`"moving."` weights rescaled, no training
Full (L_align + L_atc), fp16	`"moving."` max activation 22,784
